

RUPLAN

Cost Reduction at all Levels with AUCOTEC*view*

**AUCOTEC*view* – your competitive edge through
intelligent documentation**

AUCOTEC

Reducing the costs for documentation:

After completing a project, various copies of the electro-technical documentation are sent to the final customer. Modifications that occur during the initial operation, for example, have to be included in the documentation at a very high cost. Using AUCOTEC*view* to save the project to CD, however, will only generate low production costs for the documentation.

The documentation on paper will produce high costs for freight and paper, where as only low costs are incurred when sending digital data carriers. Data safety is playing an increasingly important role due to product liability. AUCOTEC*view* safeguards data consistency as subsequent manipulation of the CD is technically not possible.

Competitive edge:

The use of the modern documentation tool AUCOTEC*view* will produce a competitive edge over your competitors. Your customers, who demand electronic documentation explicitly, will get their requests fulfilled in an ideal way with AUCOTEC*view*.

Intuitive operation:

By means of the widely spread Acrobat Reader with its easy and self-explanatory operation, documentation can be accessed very easily by machine and plant operators. Within a very short period of time your customers will use AUCOTEC*view* efficiently and with high acceptance.

Use of standard tools:

By providing the IT standard PDF (Portable Document Format) with the Acrobat Reader, the diagrams are presented graphically and can be printed, if necessary. In addition, logical contents, such as potential chains, cross-references, references between contactors and contacts, et cetera, are rendered, thus using the possibilities of intelligent navigation to the fullest.

Unique Shopping Basket Function:

The shopping basket function provides your customers with a direct ordering function. With this function, a spare parts or service request can be sent to you directly from the documentation tool AUCOTEC*view*. Via E-Mail or other media you will receive the specific requirement information from the machine and plant operators.

Integrated Automation Interface:

In AUCOTEC*view* you will find a comfortable automation interface for the connection to several diagnosis and visualization systems. Furthermore, the integration into your EDM environment is achieved via this interface.
